VIVINO WINE SCANNER

Hi There!

Vivino Wine Scanner is an App for wine lovers on iOS and Android. The App recognizes favorite beverage labels and seeks information from a bank of 40 million users who used the App to scan over 10 million registered labels. Data are presented with average consumer ratings, quality, ratings and popularity.

In order for the Vivino Wine Scanner App to begin bottle recognition, you must separate and when you are ready click Scan and point the camera at the label. So, when the image is in focus press the camera icon.

Vivino Wine Scanner in a few seconds will return information from that label such as the full name, where it was produced, how many people searched for the label, what position it occupies in the most consumed wines, the average global ranking, how many stars it earned and the most interesting reviews from other consumers. .

The wines consulted by the App will be registered in the menu My Wines, where they can be filtered by the month and also by those that were recognized or not by the system. The function will form a completely personalized wine list.

On the other hand, submitting a label that is not in the App catalog is fine, as in a few hours or days the team will return with your data. It is also possible to scan labels offline and when connected to the internet the App will search the information.

The Vivino Wine Scanner app is integrated into the database of over 200,000 wineries, allowing you to perform deep tracking and provide information on the most diverse types of wines. The App is available for languages other than English, is free, compatible with iPhone, iPod Touch, iPad and requires iOS 3.2 or higher and a website is available at https://www.vivino.com.

Enjoy!
